## Data sheet | Solenoid valve VDHT - NPT Thread

### 2. Introduction

The VDHT valve series are designed for several applications in neutral media compatible with the sealing and O-ring materials used. Typical media are water, cleaning fluids and light heating oil.

The valves are used in several applications: car wash systems, stationary high pressure cleaning, mobile cleaning vehicles and dust bindings systems, ect.

#### Function

The directional valves are pilot operated ON/OFF – seat valves electrically activated by a coil.

#### Features

- Corrosion resistant
- Easy-to-clean
- Reliability
- Dirt tolerant, max. sieve (strainer) width 200 µm or better
- High temperature-resistant
- Robust design prevents leakage
- High coil density IP67 (NEMA 4X)
- Compact design

### Versions

The valve housing, blocks and manifolds are made of stainless steel AISI 304 (W.No. 1.4301), and the piston of stainless steel AISI 316 (W.No. 1.4401). Standard valves are delivered with PTFE piston and FPM sealings.

VDHT inline valves are available with a number of mounting possibilities, flow direction, port size: 1/4, 3/8, 1/2, 3/4 and 1" NPT and more - defining the following designation. The VDHT valves are also available in BSP.

VDHT integrated valve blocks provide a space and cost-saving solution in applications where valves are placed next to each other. Furthermore, integrated valves blocks provide a pressure loss reduction.

### 3. VDHT valve selection overview

<b>E</b>	Straight flow direction	<b>N</b>	New version slimline
<b>EA</b>	Angular flow direction	<b>BL N</b>	Block version large / New version stroke
<b>EC 3</b>	Cetop 3 manifold	<b>F</b>	Flange port input
<b>ED</b>	Displaced flow direction	<b>NC</b>	Normally closed
<b>HP</b>	High pressure variant	<b>NO</b>	Normally opened
<b>B</b>	Block version small	<b>BSP</b>	British Standard Pipe
<b>BL</b>	Block version large	<b>NPT</b>	National Pipe Thread
<b>BLM</b>	Block version manual bypass	<b>SAE</b>	Unified national fine thread

#### Temperature

- Medium temperature: 2–90 °C (35–194 °F)
- Ambient temperature: 2–80 °C (35–176 °F) depending on the coil specification
- Storage temperature: -40–80 °C (-40–176 °F) Provided that the valve is drained from fluid and stored "plugged".

#### General

<b>P<sub>in</sub> &gt; P<sub>out</sub></b>	For correct functioning of the VDHT valves, always ensure the inlet pressure to be higher than the outlet pressure
<b>Pilot flow</b>	The VDHT pilot operated poppet type (armature + poppet) always needs min. 1 l/min. (0.26 gpm) flow to ensure correct functioning
<b>Viscosity</b>	Max viscosity of fluid: 45mm <sup>2</sup> /s. Remark fluid viscosity has influence on pressure drop and opening/closing time of the VDHT valves.
